

NEW PRODUCT RELEASE

ITS Seal Technology (Patent Number: 2015101600)

Superior Engineering now includes **ITS Seal Technology** on internally threaded adjustable suspension linkages, *eliminating the ingress* of moisture or liquids that can cause corrosion or rust. This means extra long life from our components.

By adding a specially **machined seal groove** and incorporating a hydraulic seal between the locking nuts, the thread and the link, a perfect pressure tight seal is created. You will not find this technology in any other suspension components.

This **patented process** (PN-2015101600) is **EXCLUSIVE** to Superior Engineering's internally threaded items such as tierods, draglinks, panhard rods and control arms (upper and lower). **Note:** Street Legal and Compliant!

Features & Highlights:

- Protect From Moisture & Liquids
- Eliminate Corrosion Or Rust
- Special Machined Seal Groove
- 100% Made Here In Australia
- Street Legal & Compliant
- Exclusive To Superior Engineering
- NEW Patented Design

Tie Rods & Drag Links (Rock Rods)

Control Arms (Upper & Lower)

Panhard Rods (Adjustable/Fixed)
